

CrysCera™

Aesthetic Lower Bicuspid Tubes

The Enamel Safe Solution for Efficient Aesthetics

CrysCera is a new lower bicuspid tube that wears preferentially to enamel. It's hardness is similar to enamel, not ceramic, which can be nine times as hard. Used in conjunction with any aesthetic brackets, you can have a complete aesthetic solution that may be used on the upper and lower 5-5 without the risks typically associated with ceramic brackets. With excellent translucency, CrysCera is the perfect complement to aesthetic treatment.

- Mechanical lock base for safe, consistent bonding and debonding.
- Compatible with all standard bonding techniques.
- CrysCera's tube design eliminates the need for tie-wings, which are often cause of enamel wear.
- Gingivally offset bracket body design that sweeps away from occlusion and the arch wire slot is chamfered for easy wire insertion.

Efficient. Safe.
Aesthetic. Patient-Friendly

CrysCera

Aesthetic Lower Bicuspid Tubes

Price£10.00 each

	Slot Torque	A	R/L	.022 Slot
L4	17°	0°	U	00-642-00
L5	22°	0°	U	00-652-00

CrysCera Features:

- Hardness equal to or less than enamel
- Reduces risk of enamel wear
- Torque in base
- Safe debonding
- Low friction
- Highly aesthetic, the perfect complement to any ceramic bracket

Image Buccal Tubes

Glass fibre composite polymer bonding tube with torque in-base for lower profile and reduced occlusal interference.

Two types fit all molars, .018 and .022 archwire slots in the same attachment.
