

The perfect, aesthetic solution for patients who wish to avoid the look of wearing braces

For personal or professional reasons, many individuals deny themselves the benefits of orthodontia rather than appear in public wearing braces. Lingual brackets are completely undetectable, and now In-Ovation L self-ligating brackets solve one of the biggest problems orthodontics have traditionally encountered with lingual systems - archwire ligation.

The In-Ovation L clip opens and closes easily and quickly to make archwire ligation literally a "snap". In contrast to treatment with some retainer systems, treatment with In-Ovation L is under your control and treatment philosophy, not the control of some remote computer. For an appliance that is more undetectable than plastic corrector trays, consider the truly aesthetic appliance system, In-Ovation L, available exclusively from TOC.

Experience the difference with In-Ovation L

GAC has translated the proven clinical benefits of In-Ovation R into a lingual design. Only an interactive bracket provides full functionality throughout the course of treatment. This allows you to enjoy the early benefits of a free-sliding, passive design and the precise control of an active one in the later stages of treatment. In-Ovation L gives you a complete range of control options...simply by changing the archwire.

In-Ovation L

Lingual Self-Ligating Bracket System

Leading the way in self-ligating lingual brackets

- Fast and easy lingual wire changes
- Interactive design for precise, selective control
- Low profile for greater patient comfort and avoiding gingival interference
- Superior sliding mechanics
- True twin design
- Anatomically correct base design
- Metal injection moulded (MIM) for small size and greater strength
- CNC milled for true slot dimensions and smooth finish
