

In-Ovation L^{MTM}

Lingual Minor Tooth Movement Bracket System

For the fast correction of minor anterior misalignments

For so many patients the difference between an ordinary and a radiant smile can be measured in only a few millimetres. With the introduction of In-Ovation L MTM, achieving that smile can now also be measured in weeks instead of months or years.

Quick cosmetic correction

A beautiful smile results from the aesthetic alignment of the six upper and six lower anterior teeth. In-Ovation L MTM turns these into a "dazzling dozen" using a system of "quick clips" - unprecedentedly tiny, self-ligating, lingual brackets that bond just below the incisal edge. Indirect placement allows the brackets to be positioned and bonded quickly; our In-Ovation self-ligating clip allows the wire to be seated and secured in seconds.

For cases requiring tooth movement of 6mm or less, In-Ovation L MTM achieves results that compare favourably with those of the popular tray systems - but does so in approximately 12 to 24 weeks. That makes In-Ovation L MTM ideal for patients who desire fast results with a truly invisible appliance. With In-Ovation L MTM they can acquire a beautiful smile in no time!

A breakthrough in cosmetic orthodontics...

- Fast correction for minor anterior misalignments
- Additional revenue stream
- Fast, easy direct or indirect bonding
- Rapid wire engagement with self-ligating brackets
- Eliminates virtually all patient compliance issues
- You control the treatment
