

In-Ovation R Means a Better, Faster Course of Treatment

In-Ovation R is the premier mini twin, self-ligating bracket system that enables you and your staff to treat patients easily - from start to finish - while offering them a faster, more comfortable and attractive treatment option. This unique system enables you to choose whatever technique you prefer while realising predictable results as well as dramatic reductions in chairtime and treatment time.

In-Ovation R

Self-Ligating Bracket System

Better for Orthodontists and Patients

In-Ovation R is easy for Orthodontists and staff to use, while it delivers superb results, aesthetics and comfort for patients. The bracket's laser-welded SuperMesh ME base, with its compound contour, promotes ideal placement. Its innovative clip technology easily opens and closes; closing with a nudge of a thumb with an audible "click" to assure correct engagement. An interactive Cobaltoy spring clip provides better torque expression, while its special fluoride coating ensures easy opening and closing - a full arch change takes seconds.

Shorter Treatment Time

Whichever technique you employ, In-Ovation R system is designed to provide predictable results and shorter overall treatment times. The bracket's spring clip gently controls rotations throughout treatment, while its true rectangular slot helps deliver precise torque and control. In-Ovation R's reduced twin design provides optimal inter-bracket distance while yielding straight wire results.

Interactive gives you control - Start to Finish

In-Ovation R provides you with the ability to start and effectively finish your treatment in one, simple system. Using the technique of your choice, In-Ovation R enables you to maintain the precise degree of control that you need for each phase of your patient's treatment. In-Ovation R's unique Interactive technology means you can choose the degree of engagement between the bracket and wire. In-Ovation R can be passive for levelling and aligning, expressive where control is realised and free-sliding is maintained, or active for fast, optimal finishing. The choice is yours - a benefit not found in "passive only" brackets.
