

Aesthetics

Mystique is the only ceramic bracket to provide over 80% translucency; it blends beautifully with all shades of enamel. Our silicate lining is virtually invisible, and there is no unsightly slot liner visible over the wire. Mystique is also a lower profile bracket, as much as 25% lower than metal-lined ceramics.

Performance

Mystique's silicate-lined slot is strong and true. Studies conducted internally and by independent researchers have found that it holds up under extreme conditions as well as metal brackets. There is no give to the rigid wall, and there is none of the roughness associated with metal brackets. Mystique has a true rectangular slot that allows for uncompromising torque delivery.

Treatment Results

Roth Mystique is rhomboid, torque-in-base, and 100% Roth Ovation compatible. Our Roncone Rx is available for orthodontics who wish to have higher anterior torque and lower posterior torque and would appeal to those who favour the MBT Rx. Mystique is designed to provide precise, dependable results with a superior performance design, no matter what the prescription.

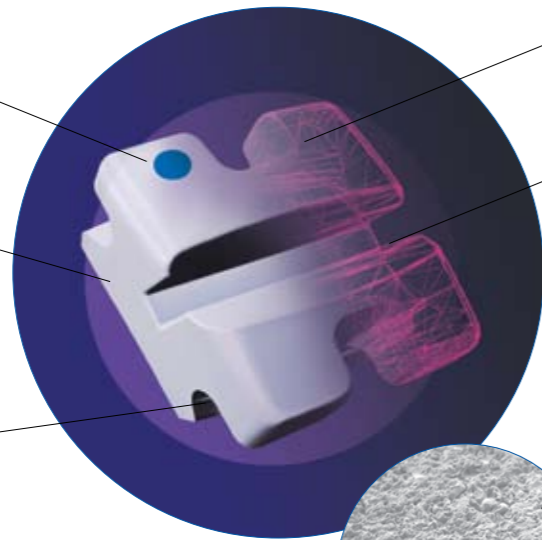

Mystique[®] MB

Ceramic Bracket System

Colour code ID for easy bracket identification

Torque in base design

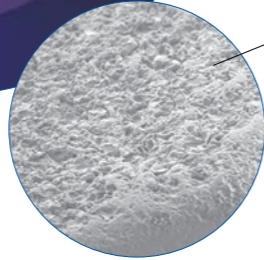

Generously undercut tie wings dramatically improve ligation when compared to traditional ceramic brackets

Moulded of highly translucent ceramic, Mystique MB brackets are virtually invisible

The silica treated slot provides smooth, deeply recessed edges that substantially reduce abrasion between the archwire and slot

The uniquely moulded, dimpled base surface assures a consistently precise bond and allows worry free bracket removal when debonding

Translucent is beautiful

Mystique MB has an optimal level of translucency and blends in perfectly with every shade of enamel. The aesthetics are further complemented by the revolutionary silica slot liner. In fact, from a distance of only one metre, Mystique is virtually invisible to the naked eye. When it comes to ceramic brackets, the choice is clear. Mystique MB.

The silica slot difference

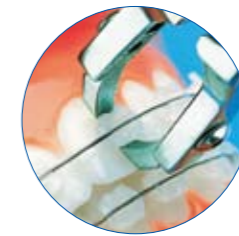

While some ceramic brackets feature a metal slot liner, Mystique MB is different. A virtually invisible silica lining takes the place of unsightly metal slots and thus provides a more aesthetically pleasing bracket with optimal sliding mechanics. The silica slot lining process results in a true rectangular slot that has uncompromising torque delivery.

Unparalleled strength and durability

Aesthetics are certainly an important aspect of ceramic brackets; the strength and durability of the brackets themselves is even more critical. Fortunately, Mystique MB delivers on all fronts. A thoroughly tested and proven second-generation mechanical lock base system ensures reliable bonding and debonding, while super heated glazing ensures overall structural integrity.

Debonding made easy

With a mechanical lock and bevelled edges, debonding with Mystique MB is a breeze. Just remove any excess flash, squeeze at the base/tooth interface to remove the bracket.

The Perfect Complement to Mystique MB

High Aesthetic Archwire

A unique rhodium treatment provides a low-reflectivity surface, with a soft, frosted appearance. Available in both Sentalloy High Aesthetic and BioForce High Aesthetic, providing the same properties and excellent performance as the original Sentalloy and BioForce wires. See page 48.

Sili-Ties™ & Sili-Chain™

Sili-Ties and chain ideal for aesthetic systems like Mystique MB. Impregnated with silicone to reduce friction, they also improve aesthetics and retain clarity longer. See page 73.

CrysCera

Lower bicuspid tubes. The enamel safe solution for efficient aesthetics. See page 41.
