

Tooth Mousse & MI Paste Plus™

Reverse the Effects of Decalcification and End "White Spots" Forever...

Tooth Mousse is a unique water based, sugar free topical cream containing Recaldent™ (CCP-ACP) which is derived from the milk protein, casein.

Tooth Mousse delivers bio-available calcium and phosphate into the tooth structure to repair and strengthen enamel and dentine. White spot lesions can be avoided by using Tooth Mousse twice daily during orthodontic treatment. Easy to apply - just use a finger or interdental brush after tooth brushing allowing 3-5 minutes working time.

Before treatment

After treatment

Tooth Mousse Strengthens Protects Replenishes
