

Thermal Nickel Titanium

TruFlex

Euro Shape Archwires

The euro archform has a slightly narrower anterior region when compared to our full form shape. Provides gentle low forces for maximum patient comfort, allowing for the introduction of larger wire sizes earlier in treatment without compromising patient comfort. TruFlex Thermal NiTi is extremely soft and pliable at room temperature for easy ligation. Once ligated, its shape memory becomes active with the patient's natural body temperature (90°F/32°C). Highly smooth, with a bright finish for reduced friction.

Full Form Archwires

The broad, natural archform is the preferred shape for most clinical applications. TruFlex Thermal NiTi is provided in the martensitic or soft and pliable state and becomes super elastic once it reaches the transformation temperature of 90°F/32°C and becomes activated or austenitic. TruFlex Thermal provides gentle, lower force levels and a smooth, bright finish. The extreme pliability of TruFlex Thermal NiTi wires offers easy ligation and therefore larger size wires can be introduced at earlier phases in treatment without compromising patient comfort.

See page 159 for Niti Chilling Tool

Reverse Curve of Spee

The same great features as TruFlex Thermal NiTi archwires combining the advantages of a heat activated, super elastic, low force wire and the benefits of a reverse curve. Thermal RCS NiTi are designed for bite opening and closing due to deep or open bites and also provides excellent leveling and alignment.
