ORTHODONTIC DIAGNOSIS & TREATMENT PLANNING COURSE

Making the right choice for my patient
4th-5th November 2016

Presented By
Professor Derrick Willmot
BDS PhD LDS FDS MOrth
Being able to examine and assess the orthodontic patient adequately is the most important step towards making the correct diagnosis. This course is about helping you diagnose your patient correctly and choosing the right system. Whether you are re-visting Orthodontics in your practice or considering it for the future, this course will help you to properly assess the needs of your patient and provide them with a satisfactory treatment plan leading to a great smile.

TOC is a specialist orthodontic company established over 23 years, supplying clinicians with quality materials and running courses. We are very privileged to have working with us Professor Derrick Willmot, BDS PhD LDS FDS MOrth an engaging speaker, with a friendly, approachable style who has a wealth of experience in Orthodontics.

Derrick Willmot: Emeritus Professor of Orthodontics at the University of Sheffield who has now retired from his post of Consultant Orthodontist from the Charles Clifford Dental Hospital, Sheffield.

He now maintains a small private practice in Chesterfield, Derbyshire. Derrick first qualified in 1969 as a Dental Surgeon at University College, London and has throughout his career continued to expand his knowledge and experience within the Orthodontics field to levels of high esteem.

Derrick has also been very involved in the development of Dental Specialist Training. He has given many lectures and courses for practitioners at all levels. He has examined the dental specialties for many Universities and the Royal Colleges in the UK and overseas.

Today there are several treatment options available that allow teeth to move safely and provide the required cosmetic look or function that your patient will be happy with. For you the clinician, it is about offering the patient the right treatment. Some cases will be totally unsuitable for aligners and quick bracket systems; a full bracket system treated by the Orthodontist maybe the only solution.

Are you unsure?

Social Six Systems / Aligners / Lingual / Comprehensive Fixed

which one do I choose for my patient?
The course will cover the following:

A day and a half of lectures, participation and practical course designed for General Dental Practitioners who wish to review their orthodontic diagnosis and treatment planning skills.

At the end of the course practitioners will:

- Have gained an overview of how to assess and examine an orthodontic patient
- Be aware of the IOTN occlusal index system and be able to carry out a routine IOTN assessment
- Understand what cephalometrics is about.
- Be able to prepare a treatment plan and have some understanding of limitations of treatment.
- Be able to prepare a problem list and diagnosis
- Have an understanding of the options available to the patient and when not to treat and when to offer a referral to a specialist.
- Gain an understanding of some of the medico legal and ethical issues that can occur when practicing orthodontics.

FEEDBACK FROM PREVIOUS COURSES

“Very experienced, knowledgeable, approachable and professional - thank you Derrick”

“I was very pleased to have found this course. It is very informative and helpful in many ways, it provides a clear structure on how a treatment plan should be drawn.”

“A very good, fantastic course, time flew by.”

“Notes are brilliant and you can carry on referring to them.”

“Excellent presentation.”
