tomas® anchorage system

**The No. 1 TAD System
in the US**

The Complete System For All Indications

The tomas system has been one of the leading skeletal anchorage systems for many years. With the tomas SD (Self-Drilling) pin and tomas EP (Elastic Palatal) pin and a selection of abutments for direct and indirect coupling, all requirements for a modern system have been taken into account. Be it distalisation, mesialisation, intrusion, palatal expansion or indirect anchorage: tomas has something to offer both the beginner and the professional in skeletal anchorage systems.

Call us now to arrange a practice demo.

Testimonial

"I have been using the TOMAS pin in my clinical practice for more than 10 years and we now also use the system in our hospital and postgraduate training programme.

The attraction of the TOMAS pin and accessories is both the simplicity and versatility of the system. To support the product I like the ongoing educational opportunities and support provided covering topics such as the importance of the pin design, the relevance of cortical bone thickness, site selection for insertion and when to pre-drill, and appropriate torque at insertion to minimise risk of failure.

The Tomas pin has especially changed my approach to hypodontia management and enabled me to achieve results that were not possible before"

Mr Trevor Hodge,

Consultant Orthodontist, Leeds Dental Institute

Treat your patients with

verve

PREMIER COLLECTION

- Guaranteed ease of use
- Treatment efficiency
- Predictable results

Verve has an advanced design that combines Metal Injection Moulding (MIM) and Computer Numerator Controlled Milling (CNC). MIM allows for a smaller and more detailed design which has greater strength whilst the CNC milling provides the most accurate of slots for advanced sliding mechanics.

Save time in bond-ups with our pre-loaded kits - at no extra charge!

Easier positioning and increased confidence in bonding with our exclusive offset and extended base options on premolars.

Bundle Offer Price £799 **SAVE £182.60**

Central Ortho-Strips

Our unique Central Strips allow the highest precision in the approximal reduction, finishing and polishing of enamel, respecting the original morphology and dental tissues.

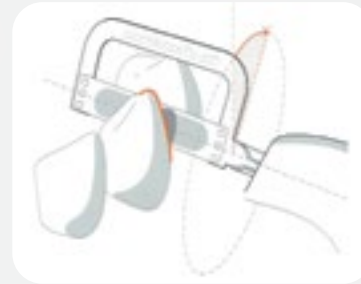

They provide the safest form of IPR avoiding the creation of a step on entry due to the non-diamond coated lower edge of the strip and prevention of dentine abrasion.

Unique Patented design

- Easier entry into the interdental contact points
- Conservation of the original morphology of the middle part of the tooth

- Prevention of cervical steps
- No unnecessary removal of dentine
- No dentine hypersensitivity

"I have been using the Swingle for 5 years and it has changed how I deliver IPR for both aligners and fixed appliances. The appliance offers control and contouring not possible with other motorised IPR instruments I would highly recommend this appliance for anyone carrying out IPR"

Dr. Farooq Ahmed, Consultant Orthodontist

"As a specialist orthodontist, it is really important that I use an IPR handpiece which is reliable and good quality. I have been using the Swingle IPR handpiece for four years now with great results. It's simple to use and the accessories provided make IPR simple and straightforward. I won't use anything else"

Dr Grant Isherwood, Specialist Orthodontist

Fast and Easy! Alliedstar IO Scanners

The Alliedstar IO scanners are very easy to use, very fast, and also very affordable.

First time scanning by first time users is routinely less than 4 minutes for upper, lower, bite, and refinement.

"It really does blow the other scanners out of the water. It's fast. Ferrari fast! But it also instantly corrects me if my scanning technique is imperfect. I thoroughly recommend the Alliedstar scanners."

Dr Thomas Docherty, BDS, Scotland - AS Sensa

"The resolution from the Alliedstar scanners far surpasses many of the far more expensive scanners. I love the auto AI reporting particularly."

Dr Dan Shaffer, BDS, RDT, Clinical Director, Harpenden

"When I was deciding to invest in an intra oral scanner, I found I was bombarded with conflicting information and options. I highly recommend David Claridge. His deep understanding of the profession and what my clinic needed made the process easy and enjoyable. The additional training provided is priceless"

Graham Bryant, CDT, Fareham - AS200

"To ensure the best outcomes, we rely on high-quality scans, and it's always a pleasure to design and work with the Alliedstar scans we receive. The surface detail and definition are exceptional. Working with David Claridge and the team at TOC has been fantastic. Their support doesn't just benefit our customers, it has also helped us boost our efficiency and grow our digital know-how."

Bridge Dental Laboratory, Christchurch

Sensational Scanning Performance

DEMO
VIDEO

Book your Practice Demo Today!

"Having trained over 4,000 dentists across 26 countries on all the major intra oral scanners, I truly believe Alliedstar scanners to be EXACTLY what today's adopter requires from their intra oral scanner.

The Alliedstar scanners are the fastest and easiest scanners I have used. Bar none. So they deliver what our customers ask us for - an easier life. As an example, Orthodontic clinics wish to convert their existing plaster models to digital files. The speed of capture, and the speed of saving the scan makes the AS scanners ideal for this purpose. Plus- there are no extra fees!

Don't take my word for it, have a demo for yourself, at your Practice."

David Claridge, TOC Dental Digital Consultant, UK

Email digital@tocdental.com now for an initial discussion

esmail eruptor™

A novel method to aid eruption of partially erupted teeth within one visit. Partially erupted teeth can be bonded without the need for full eruption.

Fully erupted teeth in only 1 visit!

- The Esmail Eruptor eyelet is offset from the bonding pad allowing the tooth to be bonded as soon as it erupts but still allows full activation of the NiTi wire.
- No need for constant repositioning of the bracket which only allows 1 – 2mm of eruption.
- 80-gauge mesh base.
- Ideal for canines and second premolars.

Designed by British Orthodontist Zaid Esmail

BDS (Hons.) MFDS RCS Ed. MSc.
MOrth RCS Ed.
Specialist in Orthodontics

SEE HOW
IT WORKS!

Single tube allows full activation in one visit.

Double tube allows sequential activation, perfect for those high canines which may need to be moved in stages.

Open space to allow impacted canine to erupt.

Esmail Eruptor is bonded and 0.014" wire ligated.

6 weeks later and the canine has fully erupted.

"One of my pet hates in orthodontics is waiting for partially erupted canines or second premolars to erupt. I was getting frustrated with constant repositioning the brackets to only erupt the tooth 1-2mm at a time. This new eruption eyelet now allows full eruption in one visit allowing me to speed up my finishing of orthodontic cases."

Dr Zaid Esmail

"We just wanted to let you know how much we are enjoying using the Esmail Eruptors. A complete stroke of genius and saves so much time with multiple repositioning of brackets. Excellent invention!"

Emily Smithard

Consultant and Specialist Orthodontist

D2™ Appliance

Simplifying Class II Correction

The D2 distalizing appliance was developed to simplify treatment of Class II cases during the initial stage of treatment. The patented D2 design treats to a Class I platform by the intra oral elastic forces. Molars are distally rotated into their desired position.

Take advantage of early treatment patient co-operation. Brackets can be placed during or after the Class I correction is completed.
