From just £115.83 per kit! (£5.79/brkt)

- Made from the highest quality polycrystalline alumina for strength and durability
- High translucency to blend naturally with all tooth shades
- Resistant to staining and discolouration
- Smooth archwire slot improves sliding mechanics
- Proven mechanical lock base with dove tail grooves for optimal bond strength and predictable debonding

List Price £6.95/brkt

Hi-Q Premium Aesthetic Archwires

Our unique matt wire treatment diffuses light so the wire blends in with the teeth and brackets, and seems to disappear in the mouth. Unlike traditional coated wires there is no coating or plating to chip or peel off.

ALL NITI WIRES ARE NOT THE SAME! SENTALLOY

The leader in super-elastic wires. Providing the most efficient tooth movement of any archwire available

- Fewer archwire changes
- Reduced treatment time
- Cost savings in patient chair time
- More efficient treatment
- Enhanced patient comfort
- Peace of mind

Different force levels in both round and rectangular

List Price: Sentalloy (Rd) £43.65 Pk NeoSentalloy (Rect.) £72.50 Pk

I have been using Sentalloy heat-activated nickel titanium arch wires, from TOC, exclusively in my practice for the past 11 years. They have revolutionised the alignment phase of treatment for me due to their ease of full engagement, speed of alignment and patient comfort. The wire properties allow me to use the 0.014" (light) archwire as my initial archwire in the majority of cases.

Left for 10 weeks, progression to stainless steel is rapid and fewer appointments are required to reach the stage of space closure. These archwires have influenced my practice more than any of the bracket designs currently marketed in the UK.

Nick Wenger - Specialist Orthodontist
Absolute Orthodontics, Truro

Avanti[™] INSTRUMENTS FOR ALIGNERS

NEW!

The Art of Aligner Detailing

Now you can save your valuable time and get great results from your aligner treatments. With these new Avanti pliers it's easy to fine tune your aligners, saving both time and money.

Tear Drop Plier

When elastics are required on an aligner use this plier to create a cut-out of the correct shape to hold them. Elastics are held securely and placing them is made much easier for the patient.

Code	List Price
SA-100-01	£105

Vertical Plier

Use on a particular tooth to produce an over correction which helps overcome one of the problems of aligners, that of correcting rotations. Makes a vertical indentation at the mesial/distal, facial or lingual aspect of a tooth.

Code	List Price
SA-100-02	£105

Horizontal Plier

Designed to create individual root torque by making a horizontal indentation. Plus, use to increase retention of aligners and retainers by placing indent under a bonded attachment or tooth's undercut.

Code	List Price
SA-100-03	£105

Hole Punch Plier

For creating space in aligners for bonded buttons or hooks that are to be placed on tooth surface. Use on gingival edge of aligner and a half circle 6mm in diameter is formed. Also use to quickly and easily remove excess plastic to stop tissue impingement by aligner.

Code	List Price
SA-100-04	£105

Retention Plier

When increased retention is required in an aligner or retainer use this plier to create a circular indentation (dimple) at the gingival margin. Also helpful in making difficult tooth movements by increasing pressure on a specific tooth.

Code	List Price
SA-100-05	£105

Crimp-it™

Diamond coated crimpable stop and tie back

The proprietary diamond coating provides exceptional holding force; more than double that of uncoated crimpable stops so they will not slide. The Crimp-it can also be used as a tie back. The slot feature makes it faster and easier to use than creating a tie back loop in the archwire or soldering a tie back hook to the archwire.

The Crimp-it is easy to place without any special instrument and crimps without damaging or notching the archwire with no need to over-crimp due to the diamond coating.

LINGUAL YOU WILL LOVE!

mtm[®]

no•trace[™]

lingual minor tooth movement

The MTM No Trace system offers the ideal approach for quick, cosmetic correction, designed to treat minor anterior alignment cases in as little as 12-24 weeks.

- Fast correction for minor anterior misalignments
- Fast and easy wire changes with self-ligating brackets
- Eliminates virtually all patient compliance issues
- Low cost alternative to customised lingual appliances
- You control the treatment

Hi-Q™ Copper Nickel Titanium

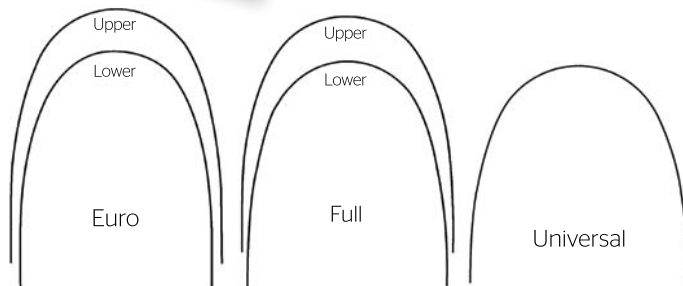

Consistent high quality

The lighter forces and high flexibility of Hi-Q Copper NiTi allows for easier wire engagement in moderate to severely misaligned cases and reduces patient discomfort. Hi-Q Copper NiTi maintains a constant force and generates more consistent tooth movement as the wire is active for longer in the optimal force range thus allowing fewer archwire changes. The higher the temperature transition, the lower the relative forces delivered by the wire.
