VERVE™

PREMIER COLLECTION

Verve has an advanced design that combines Metal Injection Moulding (MIM) and Computer Numerator Controlled Milling (CNC). MIM allows for a smaller and more detailed design which has greater strength whilst the CNC milling provides the most accurate of slots for advanced sliding mechanics.

TREAT YOUR PATIENTS WITH VERVE!

- Guaranteed ease of use
- Treatment efficiency
- Predictable results

- CNC milled slot for greater precision and more efficient treatment
- Offset and extended base options to suit your specific requirements
- Compound contouring facilitates placement
- Low profile minimises occlusal interferences
- Palladium alloy brazing for the strongest bracket-to-base bond
- Mushroom shaped hook secures chains and ligatures in place without slipping
- Torque in base for level slot alignment

Nickel Titanium & Thermal Nickel Titanium

High quality nickel titanium and thermal nickel titanium wires which are designed to provide a low continuous force, with shape superior memory and elasticity characteristics. Manufactured to precise tolerances, Hi-Q wires offer all the features and benefits you would expect from a high performance wire.

- Super elasticity - very flexible and easy to engage
- Polished finish - low friction
- Superior shape memory - stays active right throughout treatment
- Low, constant force - for most efficient tooth movement and increased patient comfort
- Rigorous quality control - every wire performs the same

List Price per Pk 10

Avanti[™] INSTRUMENTS FOR ALIGNERS

The Art of Aligner Detailing

Tear Drop Plier

SA-100-01

When elastics are required on an aligner use this plier to create a cut-out of the correct shape to hold them. Elastics are held securely and placing them is made much easier for the patient.

Vertical Plier

SA-100-02

Use on a particular tooth to produce an over correction which helps overcome one of the problems of aligners, that of correcting rotations. Makes a vertical indentation at the mesial/distal, facial or lingual aspect of a tooth.

Horizontal Plier

SA-100-03

Designed to create individual root torque by making a horizontal indentation. Plus, use to increase retention of aligners and retainers by placing indent under a bonded attachment or tooth's undercut.

Hole Punch Plier

SA-100-04

For creating space in aligners for bonded buttons or hooks that are to be placed on tooth surface. Use on gingival edge of aligner and a half circle 6mm in diameter is formed. Also use to quickly and easily remove excess plastic to stop tissue impingement by aligner.

Retention Plier

SA-100-05

When increased retention is required in an aligner or retainer use this plier to create a circular indentation (dimple) at the gingival margin. Also helpful in making difficult tooth movements by increasing pressure on a specific tooth.

Complete Avanti Plier Set SA-100-06

Presentation case containing all five instruments from the Avanti range.
